

Elementary University Physics I

PHYS 1007 A / PHYS 1007 B / BIT 1203 A

Fall term 2021

Course description and prerequisites

This course is the first part of the general physics course with emphasis on mastering the basic concepts required by scientists in other disciplines. We will cover the fundamental laws of motion, dynamics, energy and momentum conservation, fluid dynamics and heat transfer. Applications in a variety of disciplines and real-world examples will be used frequently.

This course is intended for students who lack the prerequisites for PHYS 1001 or PHYS 1003, or who do not intend to take upper-year courses in physics. Precludes additional credit for BIT 1002, BIT 1203, PHYS 1001, PHYS 1003. Prerequisite(s): (i) Grade 12 Mathematics: Advanced Functions or equivalent, or MATH 0107 (may be taken concurrently); or (ii) Grade 12 Mathematics: Calculus and Vectors or equivalent, or MATH 1007 (may be taken concurrently); or (iii) permission of the Physics Department.

Lectures three hours a week; laboratory, or tutorial an additional three hours per week.

Instructors

Razvan Gornea	PHYS 1007 group A lectures	RazvanGornea@cunet.carleton.ca
Mustafa Bahran	PHYS 1007 group B lectures	MustafaBahran@cunet.carleton.ca
Tamara Rozina	Lab/tutorial sections coordination	Tamara.Rozina@carleton.ca
Benjamin Freestone	Lab instructor	benjamin.freestone@carleton.ca
Jesse Lock	Lab instructor	jesselock@cunet.carleton.ca

Office hours are posted on the respective Brightspace websites. All email communications must be done from your Carleton University account. Email early about any possible issue regarding this course work and grades, and please keep copies of all exchanges until the end of the term.

Course philosophy and objectives

Broadly speaking, physics provides the ideal opportunity to learn the art of quantitative thinking: to learn how to turn a concept into something that one can calculate and measure. In order to solve a problem, you must critically examine the information available in a given situation; determine an effective method to approach the problem, and carry through to the solution, including a critical examination of the final answer to see if it is reasonable. These skills will serve you throughout your future careers, indeed through your life. This course is a good step towards that end. The goal of physics is to understand the physical universe and be able to accurately describe and predict what is observed. Physics is based on critical thinking, and hence helps to develop independence and free thinking. An understanding of physics may help you perceive the world around you in a more comprehensible, enjoyable, and fascinating way.

Some students believe that if they can follow the lectures in class, then they have learned physics. This is usually not true. Learning physics is not a spectator sport. To learn physics, a student must do work outside of class thinking about, and interacting with, the course material. ***No one ever learns physics by simply reading about it or listening to someone talk about it. You learn it by making the effort to understand the material and by solving problems using the principles learned.*** The standard requirement in a college class is that you spend two hours outside of class for every hour in class. There is no substitute for spending time learning the material.

Course websites

This course outline and a plethora of additional information will be published on various Brightspace websites. There are two lecture groups, each with a different instructor who maintains its dedicated Brightspace website. Lectures will be given remotely using the BBB or Zoom conferencing system that can be accessed through the Brightspace lecture website. Lectures will be recorded but attendance in real time for live lectures is preferred since it allows the students to exchange with the instructor. Although majority of lectures will be delivered live (synchronously) at the scheduled course time as well as recorded and posted after delivery, some of them will be only recorded and posted but not delivered live. When that happens students will be informed ahead of time.

In addition, there is a dedicated Brightspace website for the labs and tutorials. Please note that for this part of the course, students have been split in laboratory (same as tutorial) sections. Please, carefully identify to which group you have been assigned and follow the guidelines included below in the lab and tutorial sections.

Lectures schedule

Razvan Gornea	Group A lectures	Mondays & Wednesdays @ 8h35 - 9h55
Mustafa Bahran	Group B lectures	Wednesdays & Fridays @ 11h35 - 12h55

Brightspace Weekly Home-Work Assignments (HWs)

There will be 1 or 2 weekly online HW assignments that will be used as part of the overall term marks. These will be administered through the respective Brightspace website. The assignments will be based on material studied during the lectures. The assignments will become available at the beginning of the week for the students to attempt. You will have 2 attempts during the week before the assignment closes (see calendar within this document).

If there is any discrepancy between the marks posted in Brightspace grade and your calculated values notify the instructor immediately.

Numerical Answers

In answering the assignment calculation questions enter the answer when appropriate in scientific notation with three significant figures, e.g. 1.60×10^{-19} . You are allowed a 5% variance between your answer and the one calculated within Brightspace to account for rounding errors, and so on. If you do not your answer with three significant figures your answer will be outside of this 5% threshold and will therefore be marked as incorrect. Answers of this sort will not be eligible for reassessment by the professor.

Ensure to always take careful note of the units for your answer, typically it is expected that the answer will follow SI units (e.g. m, s, J) however there are occasions in which non-standard units will be required for specific questions. Generally, these instances will be noted in the question itself, e.g. "Express your answer in km". Also, units are not to be entered with the numerical answer for these assignments!

Pre-Class Reading Quizzes (RQs)

In addition to the weekly online assignments through the Brightspace website, there will be a reading quiz due before the lecture, as indicated in the calendar below. For details, please see the calendar for all the RQs along with lectures and HWs. These quizzes aim to ensure that you have read the designated chapter(s) from the textbook prior to attending class. There will only be one attempt at these quizzes and all quizzes will count toward the final grade (with the time allocated about 45 to 60 minutes). The questions will be, in general, conceptually oriented but sometimes calculations will be needed to complete an individual question.

Tutorials

There will be a tutorial on each alternating week with the labs (for details, please see lab and tutorial schedule below). All the sessions will be held via a BigBlueButton (BBB) conferencing system which can be accessed from the Brightspace website.

The structure of the tutorial is as follows:

A set of tutorial problems will be posted on the lab/tutorial Brightspace website at least a week before the tutorial session. Students should attempt to solve all these problems in order to prepare for the tutorial. At the start of the tutorial session students will individually complete a multiple-choice quiz consisting of 4 questions. This is open book and lasts for 30 minutes. Then the TAs will demonstrate solving example problems and answering questions about the tutorial problem set. During the last hour of the tutorial will be an open-book test consisting of two long-answer problems. ***Open book means that you can use your notes, textbook, the formula sheet, and a scientific calculator. No other aids are permitted.***

The grade for the tutorial test and the multiple-choice quiz will be combined to provide the final Tutorial Test grade for each of the 5 tutorial sessions this semester. The four highest test grades will be used to determine the final Tutorial Test score.

Note that if you are late for the tutorial, you will miss the multiple-choice quiz, and forfeit these marks. There are no retakes possible.

Students must normally attend the tutorial only in the lab section to which they belong. To be able to attend a different section, students must obtain permission from the lab coordinator Tamara Rozina (tamara.rozina@carleton.ca). Such permission will usually be granted only for emergencies or medical reasons. So, if you cannot attend your own lab section one week due to e.g. medical reasons, let us know AS SOON AS POSSIBLE so that you can be rescheduled to a different section.

Tutorial #	Title	Weight (%)	Week of
1	<i>Vectors and kinematics</i>	25	September 20, 2021
2	<i>Newton's laws</i>	25	October 04, 2021
3	<i>Energy and momentum conservation</i>	25	November 01, 2021
4	<i>Torque and angular momentum</i>	25	November 15, 2021
5	<i>Oscillations and waves</i>	25	November 29, 2021

Final Examination

There is no mid-term examination in this course. Nevertheless, as seen below, grades are distributed along a variety of course components, stimulating the students to study and practice continuously, which is definitely the key to success in this course. There is a final examination which will be scheduled officially by the university for a date in December, to be announced toward the end of the term.

It is the responsibility of the student to be available during the final examination period. The final exam will be comprehensive and might include course material seen in the lab or tutorial sessions.

Please note that tests and examinations in this course will use a remote proctoring service provided by Scheduling and Examination Services.

You can find more information at <https://carleton.ca/ses/e-proctoring/>

Students must adhere to the rules and requirements of the e-proctoring process as spelled out by Carleton and the course instructor prior to the exam date.

Grade distribution

Reading quizzes (best 10 out of 14)	10%
Homework assignments (best 10 out of 14)	15%
Tutorials (best 4 out of 5)	15%
Labs	35%
Final examination	25%
TOTAL	100%

Attending all labs and tutorials is mandatory. Also, students must obtain at least 50% of the lab component, as well as at least 50% in the theory component, in order to pass this course.

Lab sessions

Labs start the week of **September 13, 2021**. All the sessions will be held via a BBB session available on the Brightspace website. ***It is imperative that all students attend the first lab session!*** You may attend only the section that you are registered in. All changes (e.g. exemptions) must be arranged with the Lab Coordinator, Ms. Tamara Rozina at the start of term. Students who might be exempt from the Lab (if they are repeating the course, for example) must contact the Lab Coordinator. You are not automatically given a lab exemption - you must apply for it no later than **September 17, 2021**. Lab exemptions will be considered on a case-by-case basis at the discretion of the Lab Coordinator.

The grade for every lab will be based on a **quiz (10%)** and a **report (90%)**. All lab work (reports and quizzes) count towards your total lab grade for the course. **No grade will be dropped.**

All lab work must be completed by the appointed time: **1 week** after the lab session for reports and **24 hours** after the lab session for the quizzes. The penalty for a late lab report is **20% up to the End Date** specified on Brightspace website for every report submission. **No reports will be accepted for grading past their End Date.**

If you miss a lab, contact Ms. Rozina immediately.

Lab #	Title	Deadline for report	Weight (%)	Week of
1	<i>Reaction Time</i>	1 week	10	September 13, 2021
2	<i>Density</i>	1 week	15	September 27, 2021
3	<i>Spring Constant</i>	1 week	25	October 18, 2021
4	<i>Simple Pulley System</i>	1 week	25	November 8, 2021
5	<i>Simple Pendulum</i>	1 week	25	November 22, 2021

University policies

Academic Regulations, Accommodations, Plagiarism

University rules regarding registration, withdrawal, appealing marks, and most anything else you might need to know can be found on the university's website, here:

<http://calendar.carleton.ca/undergrad/regulations/academicregulationsoftheuniversity/>

Academic Accommodations for Students with Disabilities

The Paul Menton Centre for Students with Disabilities (PMC) provides services to students with Learning Disabilities (LD), psychiatric/mental health disabilities, Attention Deficit Hyperactivity Disorder (ADHD), Autism Spectrum Disorders (ASD), chronic medical conditions, and impairments in mobility, hearing, and vision. If you have a disability requiring academic accommodations in this course, please contact PMC at 613-520-6608 or pmc@carleton.ca for a formal evaluation.

If you are already registered with the PMC, contact your PMC coordinator to send your *Letter of Accommodation* at the beginning of the term, and no later than two weeks before the first in-class scheduled test or exam requiring accommodation (*if applicable*).

<https://carleton.ca/pmc/>

For Religious Obligations

Students requesting academic accommodations on the basis of religious obligation should make a formal, written request to their instructors for alternate dates and/or means of satisfying academic requirements. Such requests should be made during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist, but no later than two weeks before the compulsory event.

Accommodation is to be worked out directly and on an individual basis between the student and the instructor(s) involved. Instructors will make accommodations in a way that avoids academic disadvantage to the student.

Students or instructors who have questions or want to confirm accommodation eligibility of a religious event or practice may refer to the Equity Services website for a list of holy days and Carleton's Academic Accommodation policies, or may contact an Equity Services Advisor in the Equity Services Department for assistance.

For Pregnancy

Pregnant students requiring academic accommodations are encouraged to contact an Equity Advisor in Equity Services to complete a letter of accommodation. The student must then make an appointment to discuss her needs with the instructor at least two weeks prior to the first academic event in which it is anticipated the accommodation will be required.

Survivors of sexual violence: *As a community, Carleton University is committed to maintaining a positive learning, working and living environment where sexual violence will not be tolerated, and where survivors are supported through academic accommodations as per Carleton's Sexual Violence Policy. For more information about the services available at the university and to obtain information about sexual violence and/or support, visit carleton.ca/sexual-violence-support.*

Accommodations for student activities: *Carleton University recognizes the substantial benefits, both to the individual student and for the university, that result from a student participating in activities beyond the classroom experience. Reasonable accommodation must be provided to students who compete or perform at the national or international level. Please contact your instructor with any requests for academic accommodation during the first two weeks of class, or as soon as possible after the need for accommodation is known to exist. For more details, see [the policy](#).*

You can visit the Equity Services website to view the policies and to obtain more detailed information on academic accommodation at carleton.ca/equity/.

Plagiarism

Plagiarism is the passing off of someone else's work as your own and is a serious academic offence. For the details of what constitutes plagiarism, the potential penalties and the procedures refer to the section on Instructional Offences in the Undergraduate Calendar.

What are the Penalties for Plagiarism?

A student found to have plagiarized an assignment may be subject to one of several penalties including: expulsion; suspension from all studies at Carleton; suspension from full-time studies; and/or a reprimand; a refusal of permission to continue or to register in a specific degree program; academic probation; award of an FNS, Fail, or an ABS.

Students are expected to familiarize themselves with and follow the Carleton University Student Academic Integrity Policy (see <https://carleton.ca/registrar/academic-integrity/>). The Policy is strictly enforced and is binding on all students. Plagiarism and cheating – presenting another's ideas, arguments, words or images as your own, using unauthorized material, misrepresentation, fabricating or misrepresenting research data, unauthorized co-operation or collaboration or completing work for another student – weaken the quality of the graduate degree. Academic dishonesty in any form will not be tolerated. Students who infringe the Policy may be subject to one of several penalties including: expulsion; suspension from all studies at Carleton; suspension from full-time studies; a refusal of permission to continue or to register in a specific degree program; academic probation; or a grade of Failure in the course.

Assistance for Students

Academic and Career Development Services: <http://carleton.ca/sacds/>
