Modern Physics for physicists and engineering physicists. This course for Fall 2023 is an IN-PERSON WITH ON-CAMPUS ATTENDANCE. It is a real-time synchronous course where the professor and students meet simultaneously in room 103 of the Steacie building, at scheduled days and times. The Professor share information, key ideas, theories, problems and concepts in an in-person course environment. Participation in synchronous courses requires students to be on campus. All the lecture material will be posted on Brightspace to engage the participants.

Lecture sessions in of PHYS 2604 will be recorded and made available only to those within the class. Sessions will be recorded to enable access to students who may have conflicting commitments or cannot attend the in-person lecture. Please note that the lecture notes and the recordings are protected by copyright. Students are not permitted to reproduce or distribute lecture notes publicly for commercial or non-commercial purposes. The recordings are for your own educational use, but you are not permitted to publish to third party sites, such as social media sites and course materials sites. If you have concerns about being recorded, please email me directly so we can discuss these.

Standing in a course is determined by the course instructor subject to the approval of the Faculty Dean. This means that grades submitted by the instructor may be subject to revision. No grades are final until they have been approved by the Dean of the Faculty of Science.

All students in the class, the instructor, and any guests should be treated with respect during all interactions. With the growing use of social platforms on campuses, it is important to keep in mind that university codes of conduct still apply to the behaviours of students online.

Professor A. Bellerive (alainb@physics.carleton.ca)

Office Hours Wednesday 14:30 to 15:30; Friday 14:30 to 15:30. Outside of office hours, contact me via e-mail to arrange a time to meet.

Lecture time Wednesday and Friday 16:00 to 17:30
Classes start September 6, 2023; and end December 6, 2023.
Note that Friday December 8, 2023 follows a Monday schedule.
The lectures of October 11 & 13 will be online.

The Course The word ‘modern’ is a very relative word. Essentially this course covers the exciting period of physics at the start of the 20th century, where new phenomena were found that could not be explained with the older, classical physics of Maxwell, Rayleigh, and Newton. Classical Physics was not ‘overthrown’, but became the macroscopic limit with which the new quantum theory had to agree, upon extrapolation. The course core is constituted of topics such as photoelectric effect, special theory of relativity, wavelike properties of particles, Schrödinger equation, Rutherford-Born model of the atom and atomic structure. Necessary prerequisites for understanding the content of this course include standard vector and calculus-based algebra used to described concepts of mechanics, electrostatics, magnetism, E&M waves, thermal physics and probability & statistics.
**Texts**

**Website**

Brightspace (https://carleton.ca/brightspace/)

**Prerequisites**

Prerequisites: PHYS 1002 or PHYS 1004 (or PHYS 1008 with a grade of B- or better), plus MATH 1004 and MATH 1104 or equivalent. Restricted to B.Eng. students not in the Engineering Physics program. Students in programs other than B.Eng. must obtain permission of the Department.

**Marks**

- Assignments 30%
- Quizzes 10%
- Midterm exam 20%
- Final Exam 40%

**Drop-In-Center** Hours and location: https://physics.carleton.ca/drop-in-centre

**Course description**

This course covers a variety of topics in modern physics, with particular emphasis on topics related to special relativity and quantum mechanics. Taking a historical and practical approach, we will look at how classical physics came into conflict with experiment, thus prompting the development of the modern theories of physics. First, we will secure some concepts of chapters 15, 16, 17, 33, 34, 35 and 36 of Halliday, Resnik & Walker (Fundamentals of Physics used in PHYS1003 & PHYS1004). Then, we will cover the material in chapters 2 through 7 of the textbook by Krane. However, the course content is defined by the lectures and some material not contained in the textbooks will be included in the lecture notes. The material of chapters 8, 10, 12 and 14 will be surveyed to give the student a prospective on the structure of matter and more insight about relativistic kinematics. We will cover most of the material presented in the book by Krane:

1. Ch 1: Some Deficiencies of Classical Physics
2. Ch 2: The Special Theory of Relativity (plus extra lecture notes)
3. Ch 3: The Particle-Like Properties of Electromagnetic Radiation
4. Ch 4: The Wavelike Properties of Particles
5. Ch 5: The Schrödinger Equation
6. Ch 6: The Rutherford-Bohr Model of the Atom
7. Ch 7: The Hydrogen Atom in Wave Mechanics
8. Ch 8: Many Electron Atoms and Ch. 10: Statistical Physics (in brief)
9. Ch. 12: Nuclear Structure and Radioactivity and Ch. 14: Elementary Particles (in brief)
**Assignments:** There will be weekly assignments throughout the term, and they will generally be due one week after their distribution. Assignments will be posted on Brightspace. Students will be asked to upload their solutions (PDF format preferred) onto Brightspace. Late assignments will not be accepted without an acceptable reason such as illness. The work you turn in must be your own. The assignments are a critical part of the course and working through the problems yourself is essential to learn the material. Your homework solutions should be thorough, self-contained, and logical, with all steps explained. Assignments must be deemed legible by the marker. Late assignments will lose 10% per day. An assignment can no longer be submitted 9 days following its initial deadline.

**Quizzes:** There will be online quizzes posted on Brightspace on key topics. Quiz will be randomized for each student and each attempt. The student will have at most two attempts to complete each quiz, and plenty of time to complete each attempt (two hours), but please note that your work will count even if you would exceed this time. All quizzes will count towards your final mark.

**Exams**
- There will be one midterm exam (in-person). The midterm will consist of problems. The midterm exam will be in class on Friday October 20, 2023 at 13:00. The students will have 90 minutes to answer and provide a full detailed solution of the problem in an exam booklet. The midterm exam will be in-person and closed book.
- The final exam (in-person) will be held during the final examination period in December 2023. It will consist of problems. The student will have 180 minutes to answer and provide full solution of the problems in an exam booklet. The final exam will be in-person and closed book.
- The midterm and finals exam will be with a detailed formula sheet provided by the instructor.
- No deferred exam will be set for the midterm exam. A deferred exam will be scheduled only for the final exam. If a deferred final exam is necessary for a student, that exam will replace only the final exam component of the course mark and will only be granted if adequate term work has been completed. In this context, adequate term work means completing and submitting 75% of the assignments; the term mark before the final exam must exceed 10 out of 60.

**Reading in text books (in order):**
- Survey of sections of Chapter 15; sections of Chapter 16; sections of Chapter 17 (Halliday)
- Survey of sections Chapter 34; sections of Chapter 36; sections of Chapter 37 (Halliday)
- Review of sections of Chapter 33 (Halliday)
- Chapter 1 of Krane (all sections - read only)
- Chapter 2 of Krane (all sections - plus selected problems)
- Chapter 3 of Krane (all sections - plus selected problems)
- Chapter 4 of Krane (all sections - plus selected problems)
- Chapter 5 of Krane (all sections - plus selected problems)
- Chapter 6 of Krane (all sections - plus selected problems)
- Chapter 7 of Krane (sections 7.1 to 7.7 - plus selected problems)
- Chapter 8 of Krane (periodic table and lasers)
- Chapter 10 of Krane (survey of concepts)
- Chapter 12 of Krane (briefly with applications)
- Chapter 14 of Krane (briefly with applications and selected problems)

THE MIDTERM EXAMS WILL BE ON REVIEW CONCEPTS and PART OF CHAPTERS 2 and 3. THE FINAL EXAMS WILL BE MAINLY CONCERNED WITH CHAPTERS 2, 3, 4, 5, 6, and 7.
Online: * special days * midterm / lecture October 11 and lecture October 13, 2023

University Policies

Grade Definition: In accordance with the Carleton University Undergraduate Calendar Regulations, the letter grades assigned in this course will have the following percentage equivalents:

- A+ = 90-100
- B+ = 77-79
- C+ = 67-69
- D+ = 57-59
- A = 85-89
- B = 73-76
- C = 63-66
- D = 53-56
- A- = 80-84
- B- = 70-72
- C- = 60-62
- D- = 50-52
- F = <50

Important dates and deadlines [https://calendar.carleton.ca/academicyear/](https://calendar.carleton.ca/academicyear/)
September 19, 2023 is the last day to withdraw from this course with a full fee adjustment. The last day for academic withdrawal is November 15, 2023.

To request any academic accommodation for missed course work including exams, quizzes and assignments, please fill the self-declaration form. Hence, if you miss a test or do not submit an assignment or miss a lab quiz: immediately contact your instructor, or lab instructor, and explain why. If the reason is illness, in place of a doctor’s note or medical certificate, students are asked to complete the self-declaration form available on the Registrar’s Office website.

Paul Menton Centre for Students with Disabilities (PMC)
The Paul Menton Centre for Students with Disabilities (PMC) provides services to students with Learning Disabilities (LD), psychiatric/mental health disabilities, Attention Deficit Hyperactivity Disorder (ADHD), Autism Spectrum Disorders (ASD), chronic medical conditions, and impairments in mobility, hearing, and vision. If you have a disability requiring academic accommodations in this course, please contact PMC at 613-520-6608 or pmc@carleton.ca for a formal evaluation. If you are already registered with the PMC, contact your PMC coordinator to send me your Letter of Accommodation at the beginning of the term, and no later than two weeks before the first in-class scheduled test or exam requiring accommodation (if applicable). Requests made within two weeks will be reviewed on a case-by-case basis. After requesting accommodation from PMC, meet with me to ensure accommodation arrangements are made. Please consult the PMC website (www.carleton.ca/pmc) for the deadline to request accommodations for the formally-scheduled exam (if applicable).

Academic Regulations and Request for Academic Accommodations [https://students.carleton.ca/course-outline/](https://students.carleton.ca/course-outline/)

Student Concerns
If a concern arises regarding this course, your first point of contact is me: Email or see me during office hours and I will do my best to address your concern. If I am unable to address your concern, the next points of contact is the departmental undergraduate advisor or the chair of the department.
